

Responder[®] 5 Bed Status Station

The Room Turnover Solution

When your workflow process is simplified, your patients enjoy smoother transitions and your facility reaps improved bed turnover.

The Responder 5 Bed Status Station is an affordable four-button communication system that simplifies the room turnover workflow process within your inpatient units while saving your facility both time and money.

Better Bed Management

The Bed Status Station removes manual calls involved in communicating room needs to a simple push of a button. Routine processes are initiated on the fly. Nursing staff, Patient Placement, EVS and Transport can communicate directly and seamlessly with one another, ensuring that discharged patients get escorted out, rooms get cleaned, and admitted patients move in as quickly as possible.

Patient Placement can assign beds more efficiently throughout the day and respond more rapidly to ongoing requests for beds that continually come in from across your facility.

Improved workflow also means greater job satisfaction for your staff. The ease and precision of the Station ensures that calls and pages get to the right person the first time via pager, wireless phone or census board—no more delayed messages or miscommunications. In addition, all events are recorded and response times are calculated for process improvement tracking.

Spend less time on process and more time with patients.

Station buttons eliminate time-consuming phone calls and pages. The result is greater efficiency, which translates into better workflow and improved patient care.

Time saved is money earned.

When workflow processes improve, patient rooms are cleaned and turned over faster, and occupied rooms translate into greater revenues.

Faster Bed Turnover

The Bed Status Station helps staff reduce the time it takes to turn over a bed for the next patient, and quicker turnovers mean more revenue for your hospital. Better turnover rates also translate into improved patient satisfaction—discharged patients get home sooner, and admitted patients don't have to wait for the beds they need.

The Bed Status Station calls enhance the healing environment for your patients by eliminating background noise and intrusive phone calls between staff members.

Customizable to Your Workflow

The Bed Status Station's buttons are designed for bed turnover processes typically used in inpatient units, but they can be customized for other types of events—STAT Clean, Patient Arrival or Room Ready, for example—to suit your workflow processes. Responder 5 allows you to change button names and call routing according to your facility's established procedures.

Patient has been discharged and is ready to be escorted out of the hospital.

Alert EVS that room is vacant and ready for cleaning

Update EVS, and Patient Placement that the room will be available soon for a new patient

Notify Patient Placement and Admitting Staff that the room is ready for a new patient

Responder 5 Bed Status Station Highlights

- Four buttons control hundreds of workflow processes per day
- Accurate and immediate communication
- Events and responses are stored and easy to retrieve in Reports Manager
- Customizable to your procedures
- Developed by the industry leader in nurse call systems
